STJ-340
Four-Element Bridge Magnetic Sensor

STJ-340 – Bare Die

Die Dimensions – 1mm²
Die Thickness - 0.3 mm

STJ-340 – SOIC 8 Package Information

Equivalent Circuit

\[ V_B = \text{Bias Terminals} \]
\[ V_o = \text{Output Terminal} \]

NOTES:
1. JEDEC OUTLINE: MS-012 AA
2. DIMENSIONS "D" DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS AND GATE BURRS SHALL NOT EXCEED 0.15mm (.006") PER SIDE.
3. DIMENSIONS "E" DOES NOT INCLUDE INTER-LEAD FLASH OR PROTRUSIONS. INTER-LEAD FLASH AND PROTRUSIONS SHALL NOT EXCEED 0.25mm (.010") PER SIDE.

STJ-340 – Notes and Handling Instructions

1. MTJ sensors will fail if subjected to a sufficiently large differential voltage. A good rule-of-thumb is to **limit the voltage drop across the sensor element to 12 V** or less at all times.

2. Please store sensors as they were shipped and in a location which is away from sources of radiated electromagnetic fields (ESD/EMI).

3. Sensors are sensitive to electrostatic discharge (ESD). Be careful to ground tools and your hands when handling the sensors. If possible, be sure to wear grounding straps when handling the sensors.

4. To directly measure MTJ sensor resistance, connect to a constant current source, and measure the voltage drop directly across the two active leads. In order to limit the voltage drop across the MTJ sensor, initial applied current values should **NOT exceed 50 µA**. If this amount of current is not sufficient to measure the device resistance, the current may be increased gradually until the sensor voltage is sufficient to make an accurate reading.
